

Location-sensitive File AccessControl

Atsushi Ito, Yasunari Harada

2011.12.10

An International Workshop on Linguistics of BA and The 11th Korea-Japan
Workshop on Linguistics and Language Processing

Background

- ◆ For study of linguistics, we have to use books, DVDs, CDs etc.
- ◆ It is prohibited to copy them by copyright act.
- ◆ It is only allowed to use copies for education at a class.

Problems

- ◆ Students are allowed to use contents in a school, university.
- ◆ Students have to study at home.

Solution

- ◆ Provide access control to contents for study
- ◆ Requirements: It should be allowed to use contents at registered location.
- ◆ Ideas to solve this problem.
 - ◆ (1) access contents server from home by on-line => problem of huge number of access and security to protect illegal access
 - ◆ (2) bring the contents to home => how to know the location?

Basic Idea

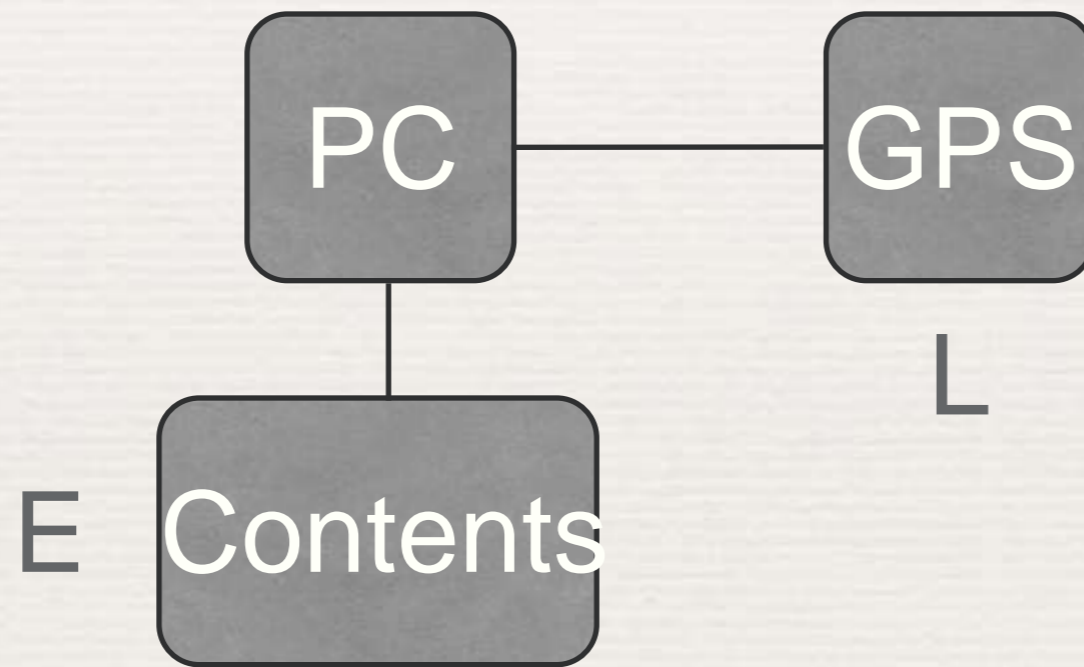

Detail of encryption

- ◆ F a file (contents)
- ◆ E encrypted F
- ◆ L location
- ◆ $A(y,x)$ y is encrypted by x
- ◆ $Q(v,u)$ decode v by u

- ◆ $E = A(F,L)$
- ◆ $F = Q(E,L) = Q(A(F,L),L)$

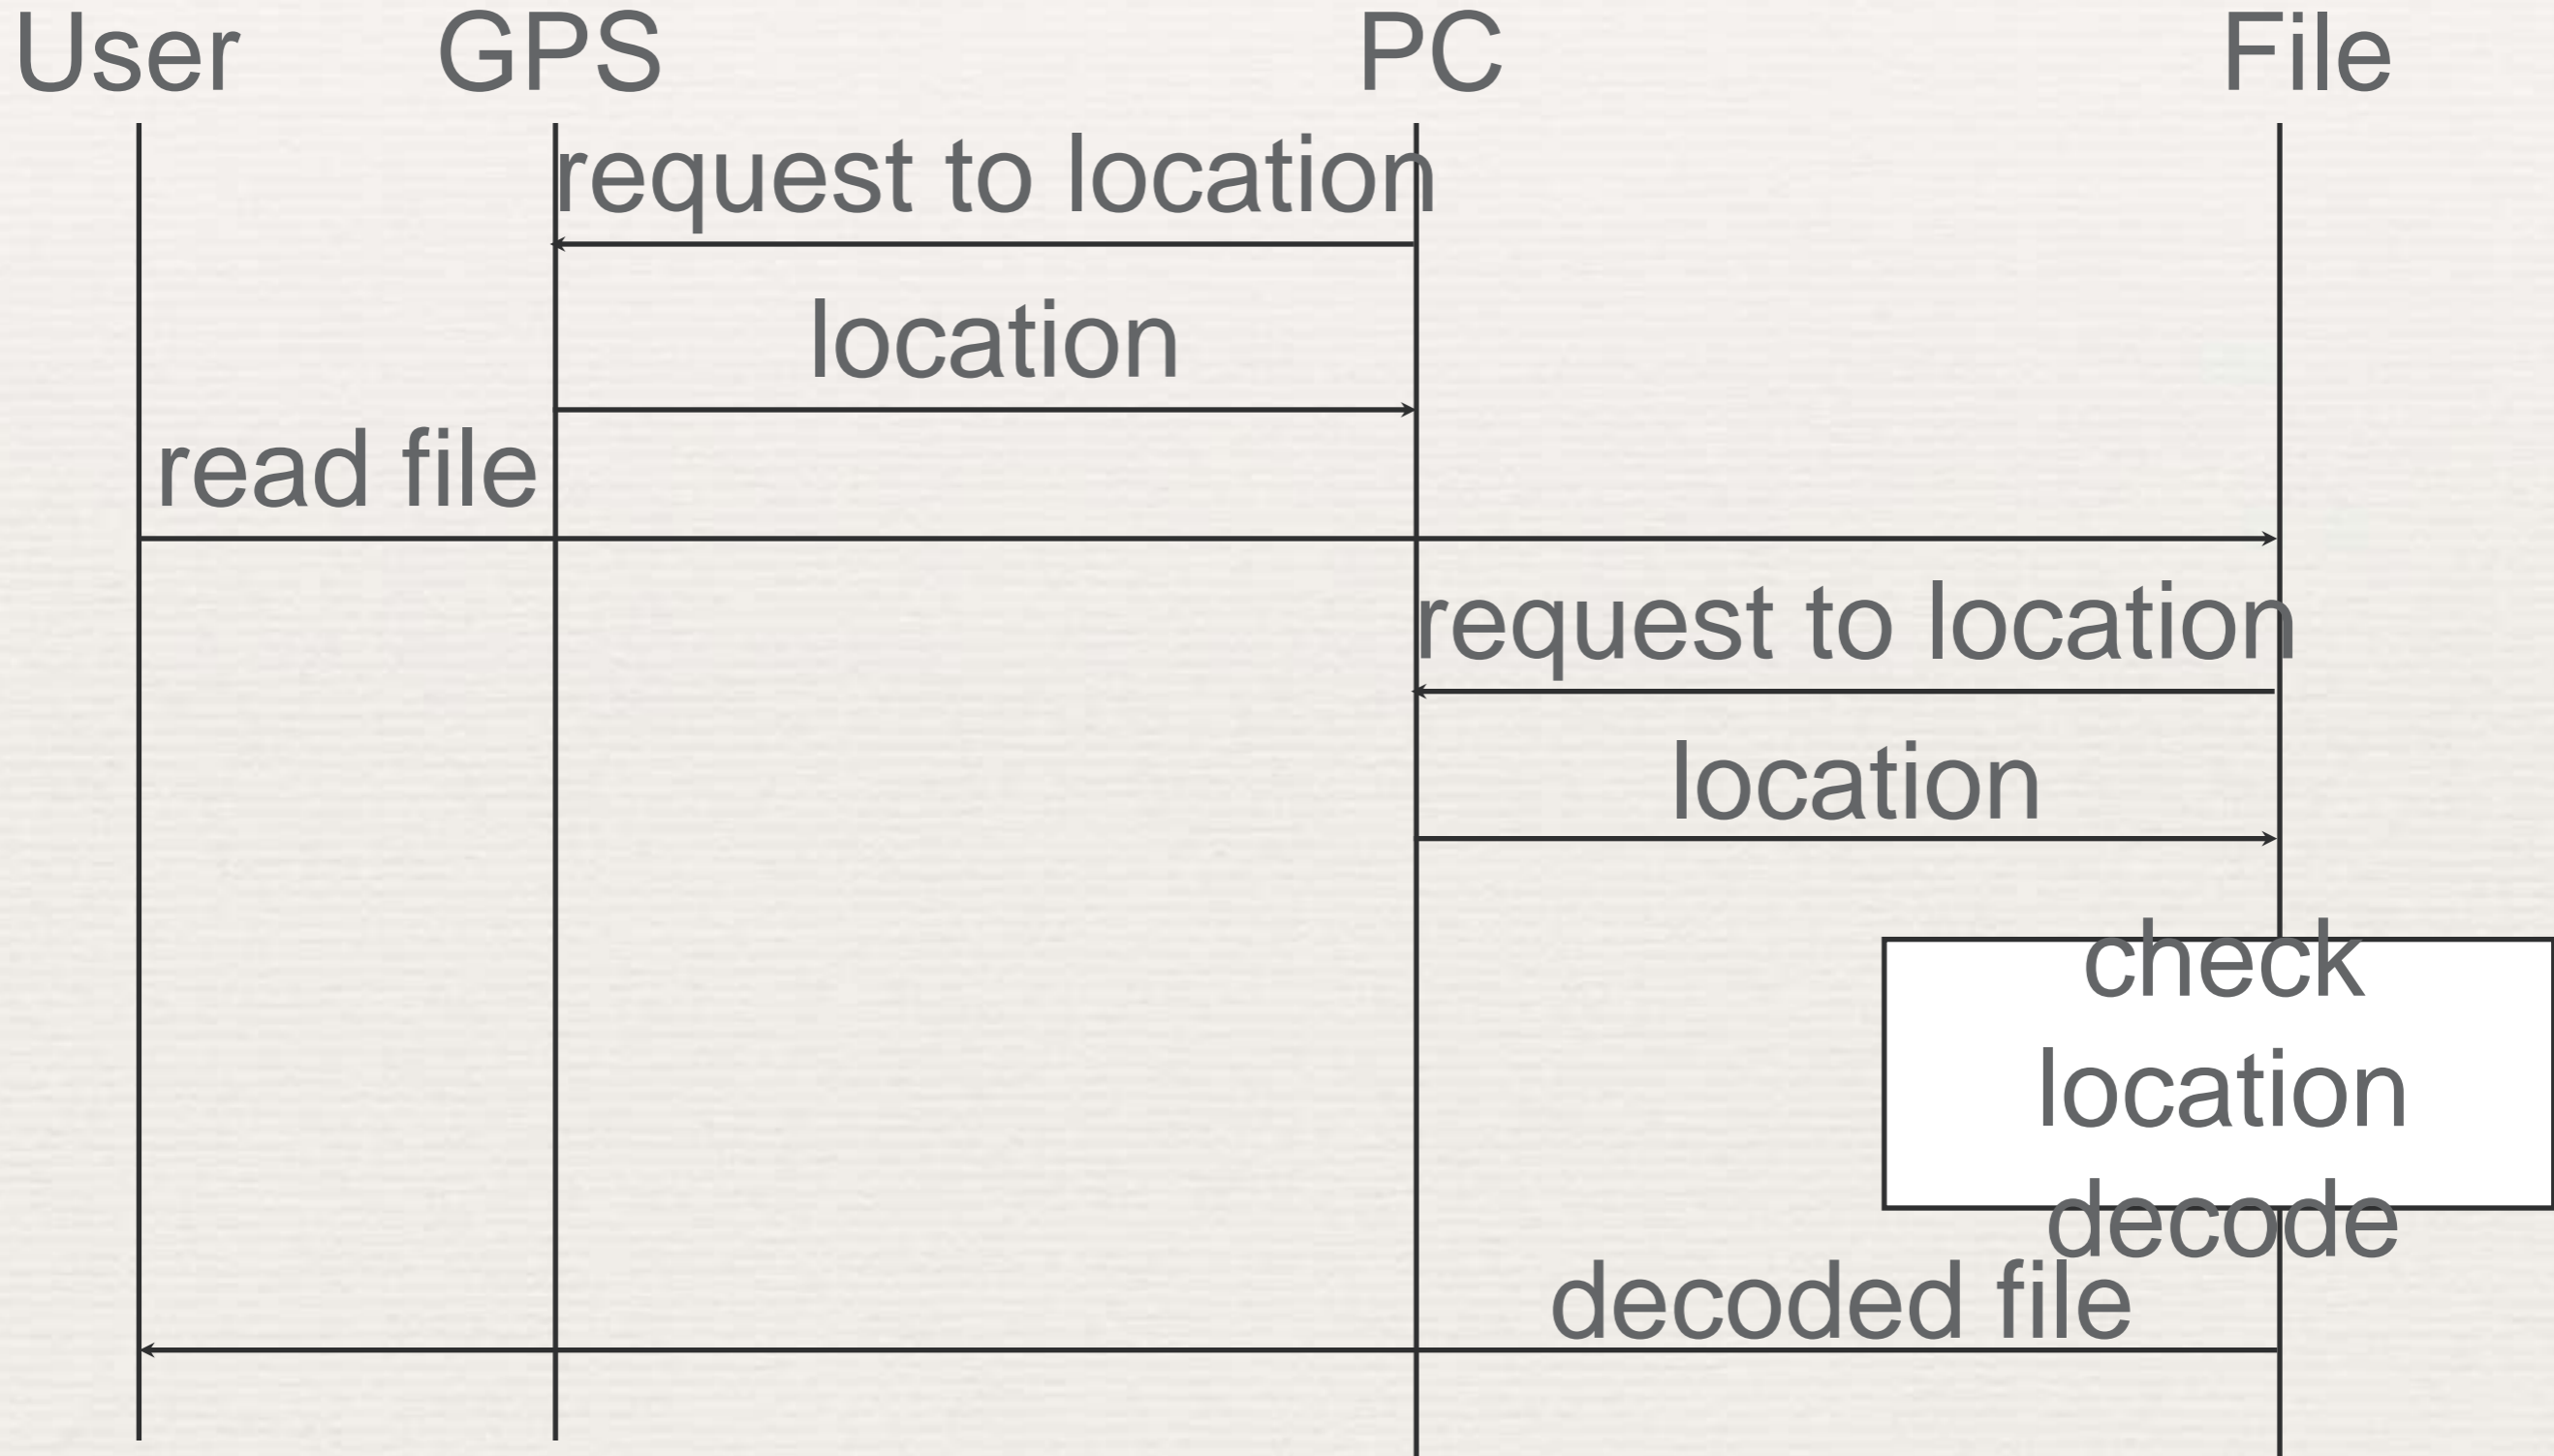

Basic Idea

Example

- ◆ Location (x,y)
- ◆ $x=140.30.15$ (longitude) $y=40.10.30$ (latitude)
- ◆ $Key = f(x,y)$
- ◆ $f = x + y$
- ◆ $Key = 1403015401030$
- ◆ $E = A(F,L) = A(F, Key)$

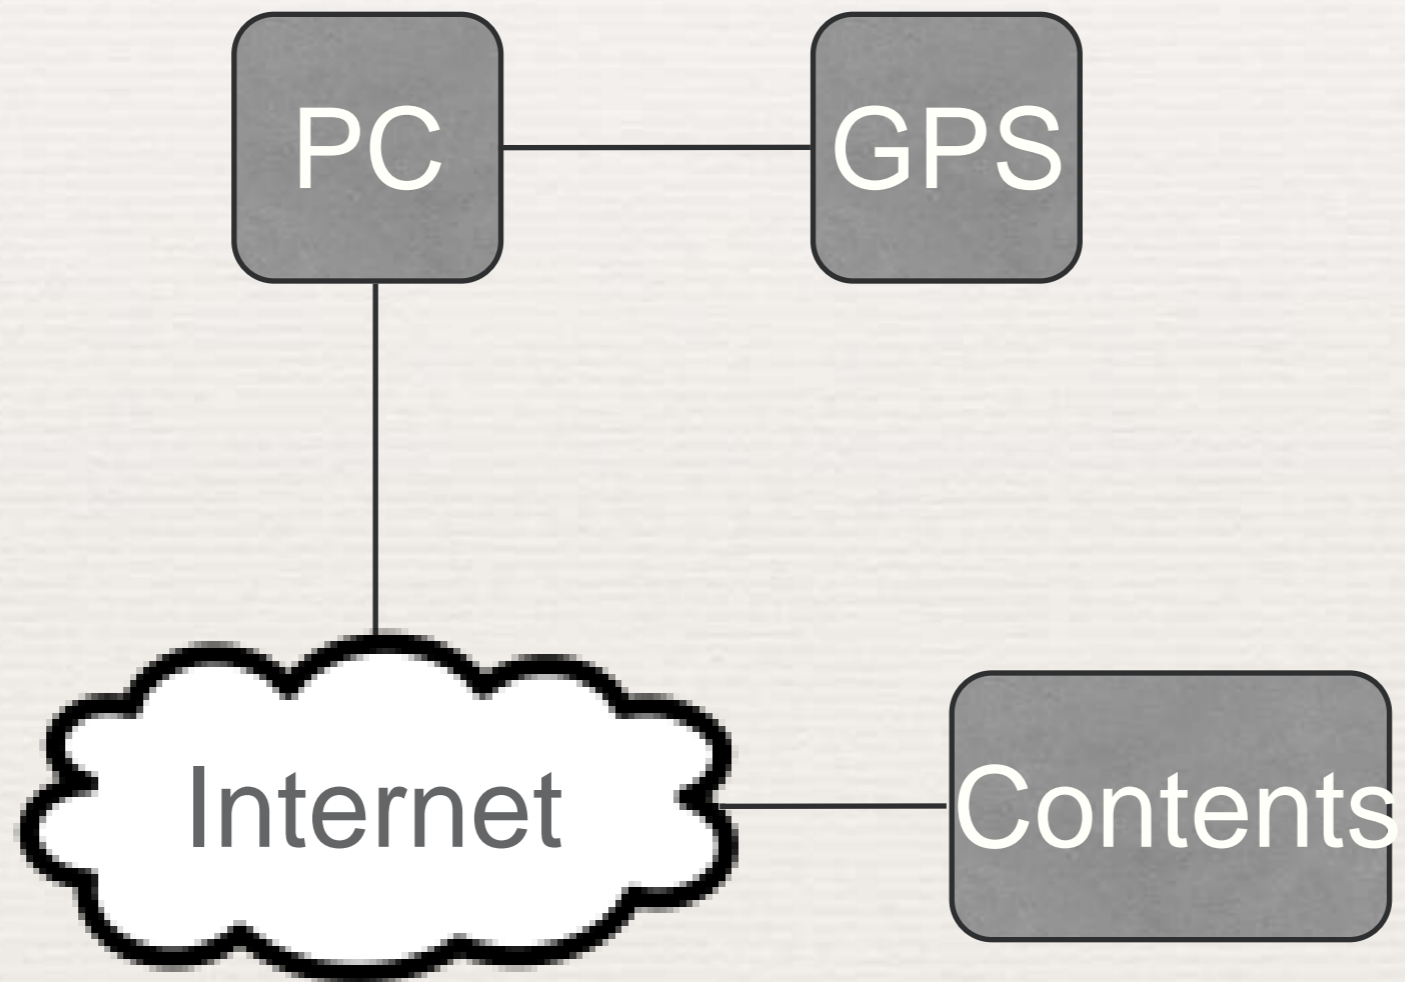

Sequence Chart

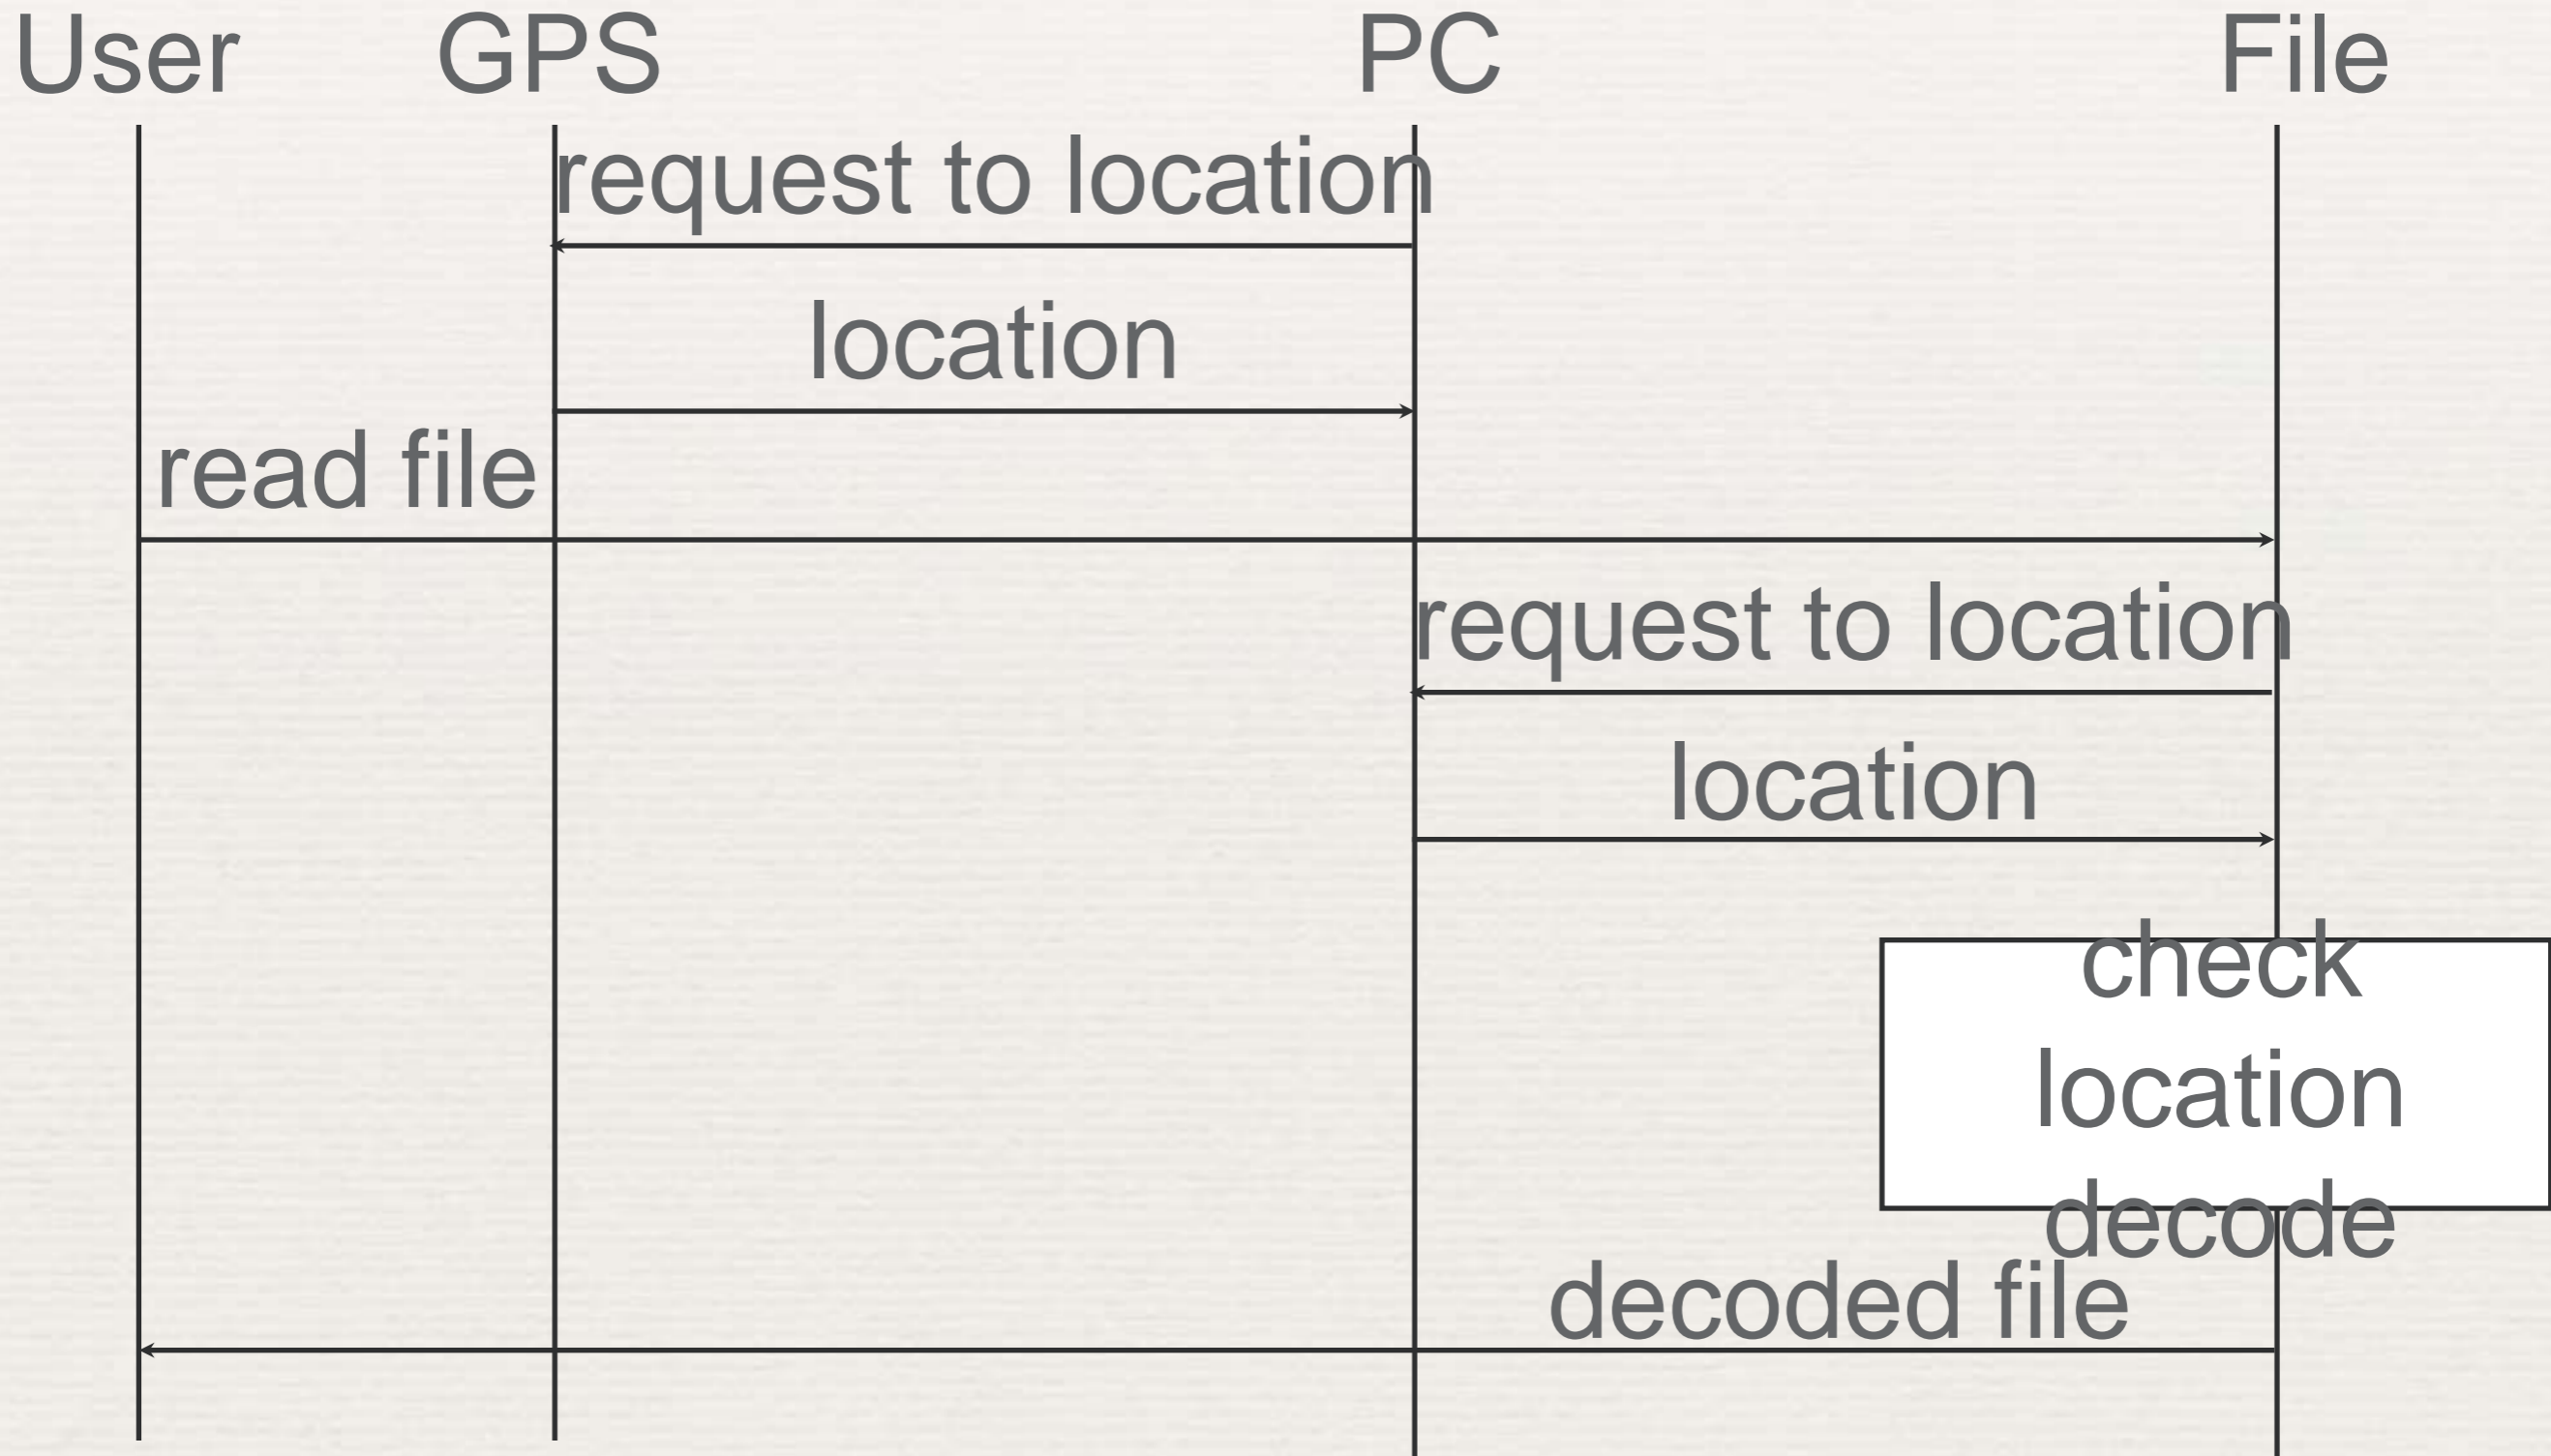

Multiple Location

- ◆ $L_i (i=1 \sim n)$
- ◆ Example:
- ◆ 3 locations L_1, L_2, L_3
- ◆ Encrypted key $K = G(L_1) = G(L_2) = G(L_3)$
- ◆ file E is encrypted by $E = A(F, K)$
- ◆ decode by $F = B(E, K)$

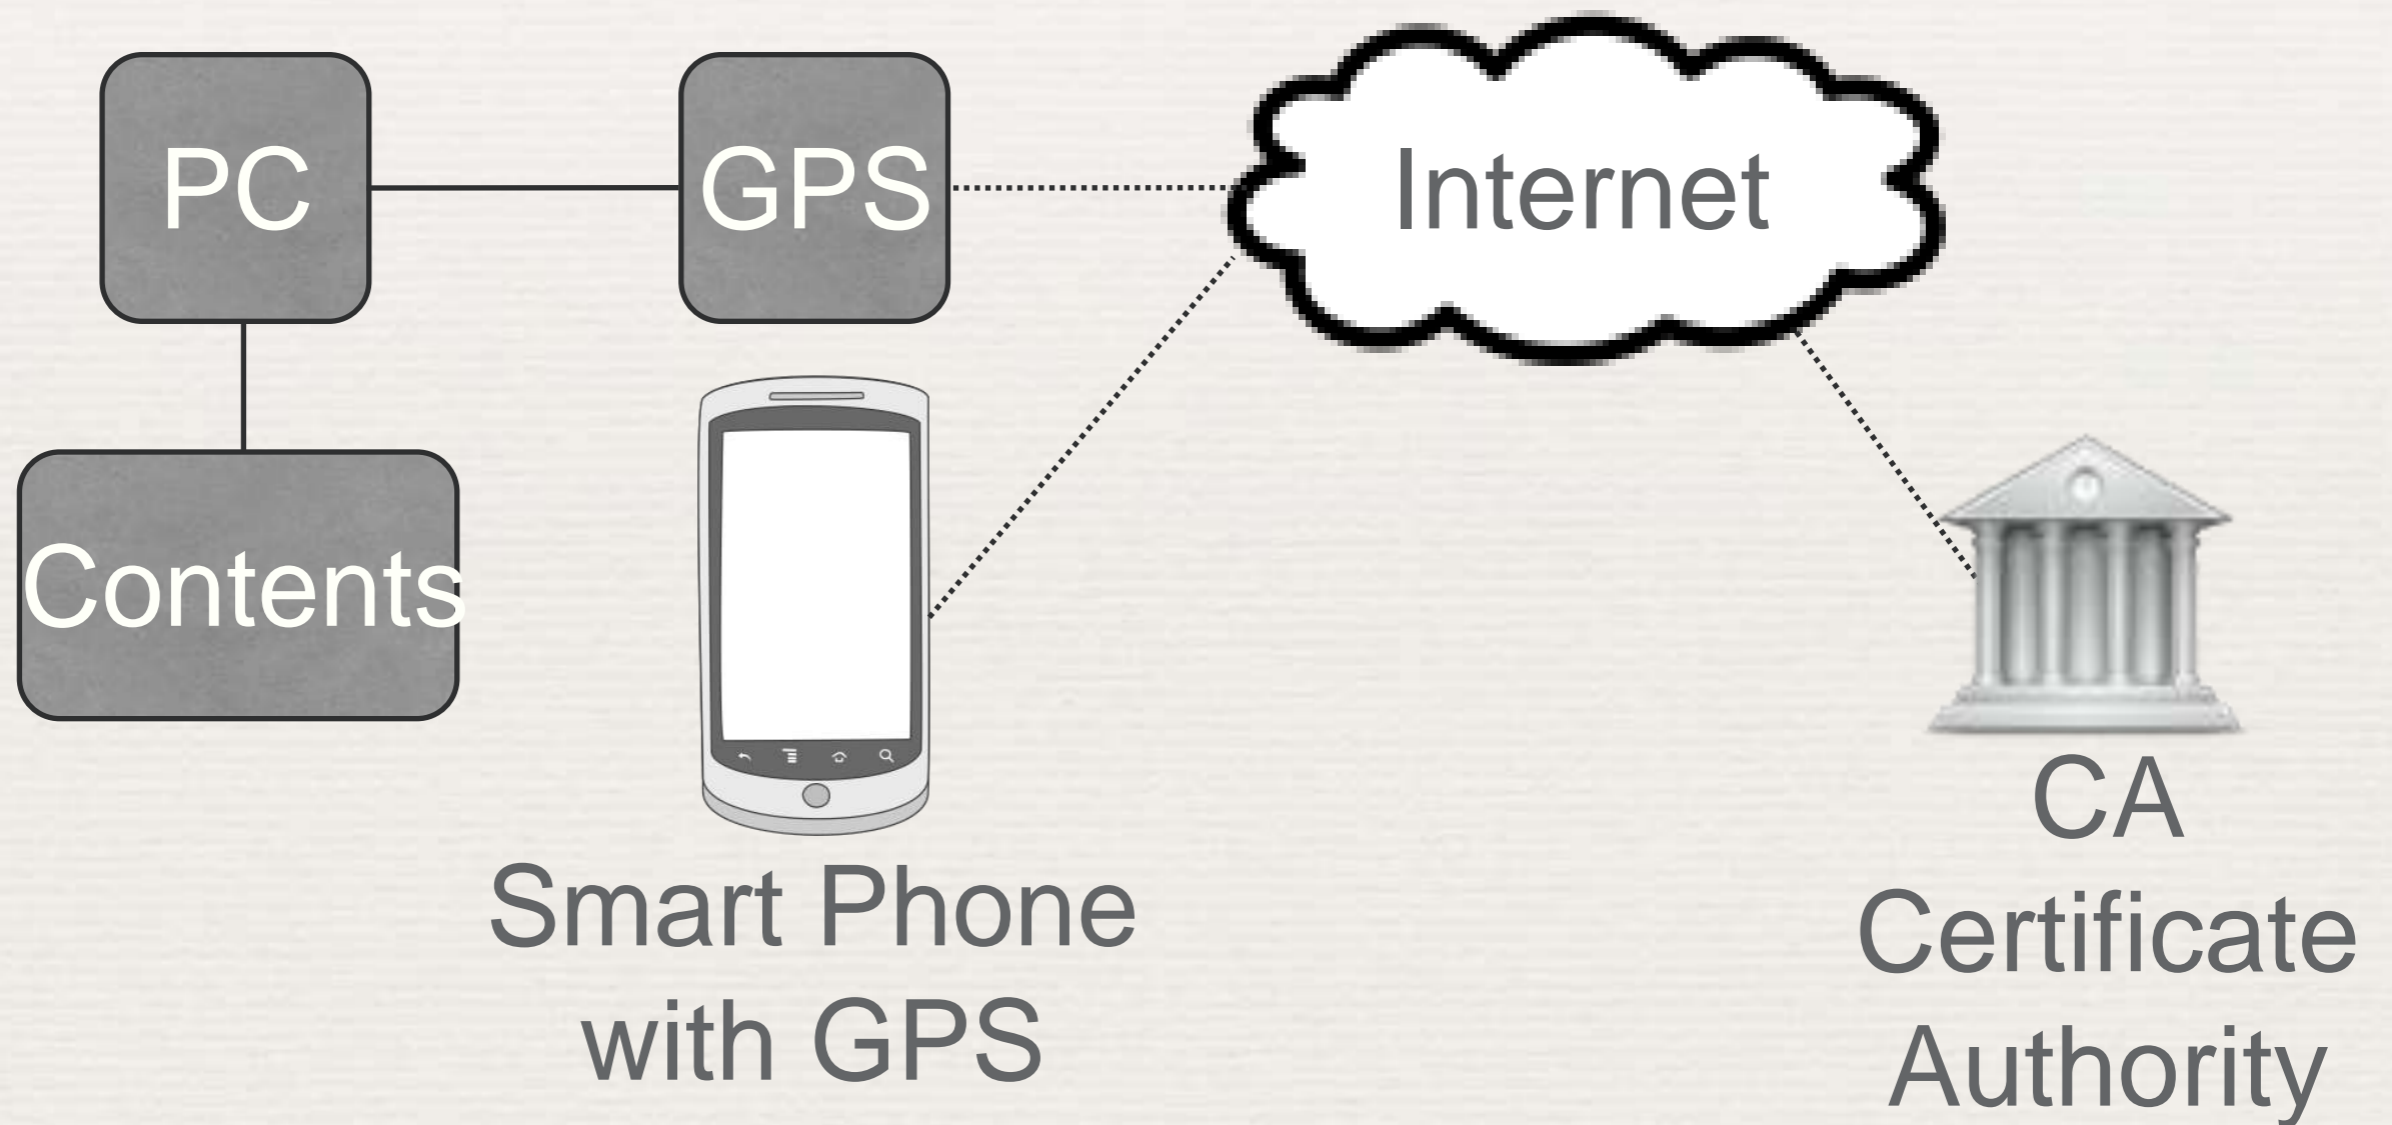

Remote Access

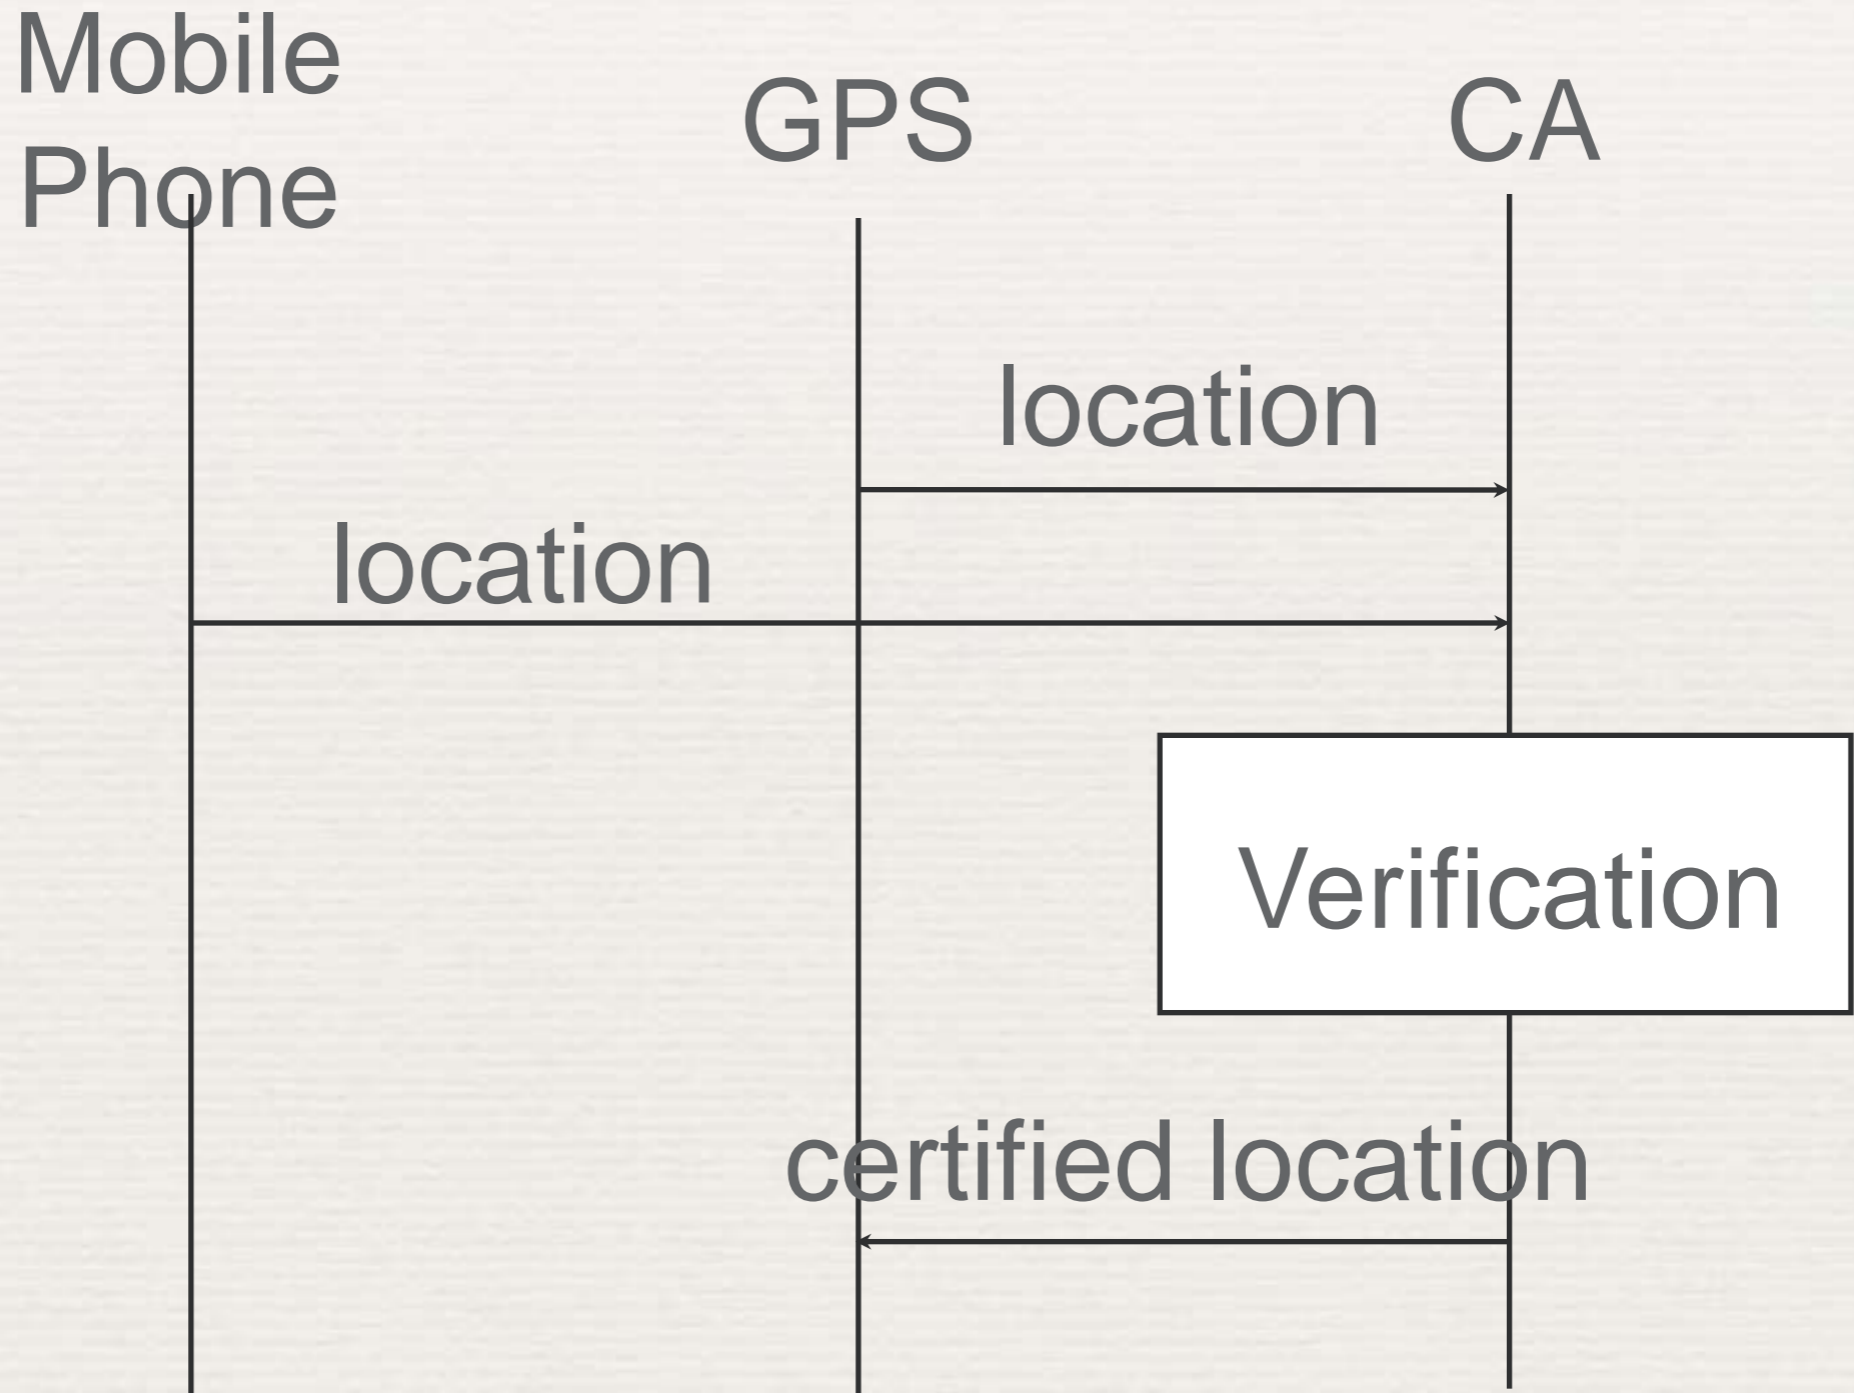

Sequence Chart

Safer System

Sequence Chart 2

Variations

Problems of ICT society

- ◆ A lot of information is stored as files.
- ◆ It is easy to access information.
- ◆ Problems of security and privacy

Other Applications

- ◆ Documents for secret meeting
- ◆ Medical Information
- ◆ Diplomatic documents
- ◆ Judicial documents
- ◆ Customer Information

◆ Thank you

◆ Q & A
